Abstract of JP7288783

PURPOSE: To prevent persons other than contractors from using a program table by interleaving and transmitting the video signal, the audio signal, and text data corresponding to pictures, explanations, and characters, which constitute the program table of television programs to be broadcasted, with one program as the unit. **CONSTITUTION:** The video signal constituting the program table is scrambled after A/D conversion and is supplied to an interleaving circuit 43. The audio signal accompanied with the video signal is scrambled after A/D conversion and is supplied to the interleaving circuit 43, and text data is scrambled and is supplied to the interleaving circuit 43. This circuit 43 interleaves inputted video data, audio data and text data within the range of the same program table. This program table data is synthesized with audio data for a program by a synthesizing circuit 35 and is arranged in a prescribed packet of the data channel. It is modulated together with the video signal constituting the program by a modulation circuit 33 and is outputted.
